

This heatmap illustrates the projected weighted cooling energy consumption (TWh) across different age groups (0-4 to 95-99) under the SSP2-4.5 scenario for the period 2060-2079. The x-axis represents the Heat Index, ranging from 80.5 to 81.2. The y-axis represents Age Groups. The color scale indicates the consumption level, with darker colors representing lower consumption and lighter colors representing higher consumption. The highest consumption is observed in the 50-54 age group, which is highlighted in bright yellow, indicating values above 4.50 TWh. Consumption generally decreases as the heat index increases, particularly for older age groups.

Heat Index (SSP2-4.5) (2060-2079)
