

This heatmap illustrates the projected weighted cooling energy consumption (TWh) across different age groups (0-4 to 95-99) under the SSP5-8.5 scenario for the period 2040-2059. The x-axis represents the Heat Index, ranging from 80.00 to 81.75. The y-axis represents Age Groups. The color scale indicates the consumption level, ranging from 0.0 TWh (dark blue) to 5.4 TWh (yellow). The highest consumption is observed in the 30-34 age group, peaking around 5.4 TWh at a heat index of approximately 81.00. Consumption generally decreases as the heat index increases, particularly for older age groups.
